**Promise to create  
unique experiences  
for web and mobile**

**We worked hard like bees**

DOCUMENTICA addresses imaging, scanning, capturing, indexing, classification and storage problems.

Document life-cycle and record management is a challenge for the most of the companies. Users can search documents by their contents.

Users can share, collaborate and distribute files in a moderated environment that operates on access control lists. A decision maker can control all collaboration and activities.

Document retrieval and other activities are carried out for customers and co-workers or agencies.

6 Access Anytime! Anywhere!

Capture Accepting and processing images of paper documents from scanners or multifunction printers.

12 Fly over the clouds

14 What makes DOCUMENTICA special?

Core ideas DOCUMENTICA follows industry standards and compliance

8 Search Engine

10 DOCUMENTICA ARCHIVES

Access control Document security is vital. Compliance requirements for certain documents can be quite complex.

Philosophy Deploying rigid and slick software to a server always makes us proud.

16 Get in touch

# Access your digital space anytime & anywhere

Accessing documents became necessity from various devices The program can be easily incorporated with existing systems to enable document imaging and provides a paperless office solution.

Accessing archived files will be secure, manageable and auditable. Companies' digital assets and their electronic archive will be safe in DOCUMENTICA preservation, yet accessible anytime, from anywhere using any web enabled device (smart-phone, tablet or desktop)

# Search Engine

We developed a text content search engine that is built on the .NET implementation of industry standard Apache "Lucene" project.

We have created a new content extracting engine in 100% .NET core that supports most of the popular file formats like 'doc, docx, xls, xlsx, ppt, pdf, html, text' and more

# FLY OVER the CLOUD

## Document life-cycle

Easy to access and edit documents and forms from web and mobile.

DOCUMENTICA has a simple yet efficient architecture that provides complex functionality, such as allowing access to the file system via a secure web interface or managing versions of your documents

Our software supports life-cycle management features like version control, retention policies and Meta data support for your electronic archive.

Your staff can find the documents not only using their file names and the Meta information but also by content.

# Internalization

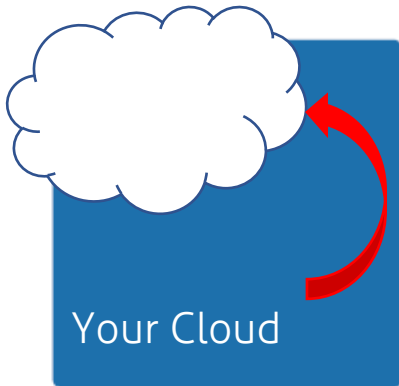

More and more the world is proving to be a smaller place. When you publish your Internet site, you are likely to have visitors from all over the world and not only your country.

Internationalization significantly affects the ease of the product's localization. Retrofitting a linguistically- and culturally-centered deliverable for a global market is obviously much more difficult and time-consuming than designing a deliverable with the intent of presenting it globally. DOCUMENTICA supports English, German, Spanish, French, Russian and Turkish languages.

# instruments

Documentica can be installed privately on your virtual or dedicated servers on the internet. This can be a great advantage to control your server.

You can prevent unauthorized access without agreeing policies with giant service

Speed obsessive development

Simple yet, powerfull architecture of the DOCUMENTICA software developed in .net core technology.

Every procedure reviewed for speed optimization.

DOCUMENTICA uses as lucene as Indexing engine.

M-Filters

DOCUMENTICA follows industry standards and compliance. In addition to the industry standards and compliances, we set a new standard called "M-Filters". These small dynamic link libraries have content extraction algorithms. Developers can easily implement the M-Filter assembly interface that is consumable by DOCUMENTICA content indexing services without code re-compilation. Therefore developers can create a new plug-ins for content extraction from different file types.

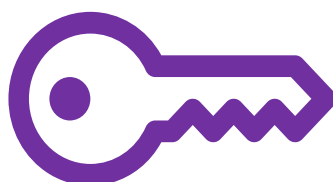

# instruments

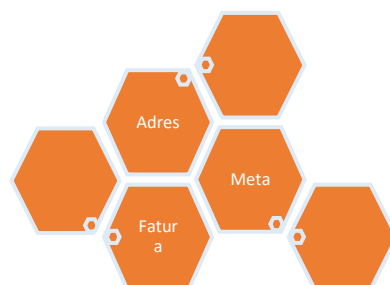

## Document Versioning

Versioning is a process by which documents are checked in or out of the document management system, allowing users to retrieve previous versions and to continue work from a selected point. Versioning is useful for documents that change over time and require updating, but it may be necessary to go back to or reference a previous copy.

## Advance Security Features

- C3 security features.
- Users, groups domain, all users and anonymous and owner implementations, Security Inheritance.
- Promote or Demoting rights.
- Object based and action level level.

## Meta Data

DOCUMENTICA performs text extraction on electronic documents. The resulting extracted text can be used to assist users in locating documents by identifying probable keywords or providing for full text search capability, or can be used on its own. Extracted text can also be stored as a component of metadata, stored with the image, or separately as a source for searching document collections.

# Arşivle

## WebDAV Delta Host

Based on industry standard distributed authoring and versioning protocols.

Upload

Easy to Use

already wrote

Collaborate  
documents with  
your staff and  
the  
customers.

Content Search Engine  
Based on apache lucene project  
powerfull indexing and  
searching by content and meta  
data

META-DATA

# features

- W2 interface & Responsive GUI on HTML5
- Scanning and Imaging Integration
- REST API support
- MS Office integration via DAV
- Standard Folder and Document structures
- Online Page Authoring
- Multiple repositories
- Developed on .NET CORE C# and supports docker
- Import documents as easy as copying to a drive
- Document version control
- Lock, Unlock, Check-out, Check-in, life-cycle
- Security Inheritance, flexible permissions using ACL
- Document profiles and Meta data support
- Searching document and folders by their contents and meta-data.
- Record retentions
- Easy Backup and Restore procedures

# OPEN SOURCE & Competitive

## SERVER DEPLOYMENT REQUIREMENTS

WINDOWS or LINUX servers.  
Possible Docker deployment  
Possible MS IIS SERVER with ASP.NET core  
4 GB RAM,  
ENOUGH STORAGE SPACE for documents and Indexes

Our company focus is to provide document management and digital archiving solutions for personal, small and medium company needs.
